## **Enablence Technologies Inc. to Host Conference Call for Fiscal 2009 Third Quarter Financial Results**

**Ottawa, Canada – March 23, 2009** Enablence Technologies Inc. ("Enablence" or the "Company") (TSX VENTURE:ENA), a leading broadband supplier including fiber-to-the-home (FTTH) equipment for triple-play residential and business services and optical components and subsystems for access, metro and long haul markets, announced today that it will host a conference call on Tuesday, March 31, 2009 between 10:00 am and 10:30 am EST. All interested parties should call 1-866-223-7781. Management will respond to questions from analysts on this call.

A press release announcing the quarterly results will be issued after the markets close on Monday, March 30, 2009. The interim unaudited financial statements and related Management Discussion and Analysis will be made available at [www.enablence.com](http://www.enablence.com).

An archived replay of the conference call will be available until April 7, 2009 at [www.enablence.com](http://www.enablence.com).

### **About Enablence Technologies Inc.**

Enablence Technologies Inc., (TSX VENTURE:ENA) a publicly traded company headquartered in Ottawa, Canada, designs, manufactures and sells optical components, subsystems and systems to a global customer base.

Enablence's Systems Division has an expanding Fiber-to-the-Premises (FTTP) product portfolio featuring a variety of architectural options. It enables services providers to evolve their access networks from traditional copper-based networks to advanced optical communications access networks that are based on state of the art IP and Ethernet standards, for triple play voice, video and data services including HDTV, IP Telephony and ultrafast internet access. The Division's network equipment has been implemented at over 420 services providers world-wide that serve over 4 million subscribers.

Enablence's Optical Components and Subsystems Division is a global leader in applying Planar Lightwave Circuit (PLC) technology to integrate multiple components into a single optical chip to reduce footprint and costs. Network and equipment designers around the world turn to Enablence for a variety of components and subsystems for access, metro and long-haul including transceivers, splitters, waveguides, optical channel monitors, multiplexers, ROADMs, switches, tunable dispersion compensators, and photodiodes. The Division serves over 120 system and subsystem developers and its products have been integrated in all major communications networks world-wide, serving tens of millions of subscribers.
